Key indicators: single-crystal X-ray study; $T = 173\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$;
 R factor = 0.022; wR factor = 0.061; data-to-parameter ratio = 17.7.

The asymmetric unit of the title compound, $[\text{Fe}(\text{C}_5\text{H}_5)(\text{C}_{17}\text{H}_{13}\text{N}_2)]$, contains two independent molecules whose conformations differ, especially in the 4-{(pyridin-4-yl)methylidene]amino}phenyl unit where one is flipped by almost 180° . The cyclopentadienyl rings of the ferrocene unit also exhibit different staggered conformations: in one molecule the conformation is staggered by $9.43(2)^\circ$ and in the other by $24.46(1)^\circ$ from an ideal eclipsed geometry. The plane of the benzene ring is tilted away from the ferrocene group in both molecules, with dihedral angles of $6.97(1)$ and $10.30(2)^\circ$. The benzene ring is also slightly twisted from the plane of the pyridine ring, with dihedral angles of $5.98(2)$ and $6.51(2)^\circ$ in the two molecules.

(4-{{(Pyridin-4-yl)methylidene}amino}phenyl)ferrocene

Vincent O. Nyamori, Godfrey Keru and Bernard Omondi

S1. Comment

As part of investigation of the title compound (I) as a catalyst for synthesis of nitrogen doped shaped carbon nanomaterials we have determined its crystal structure. The compound crystallized with two independent molecules in the asymmetric unit (Fig. 1). In each molecule, the ferrocenyl moiety is linked to phenyl with imine and pyridine groups.

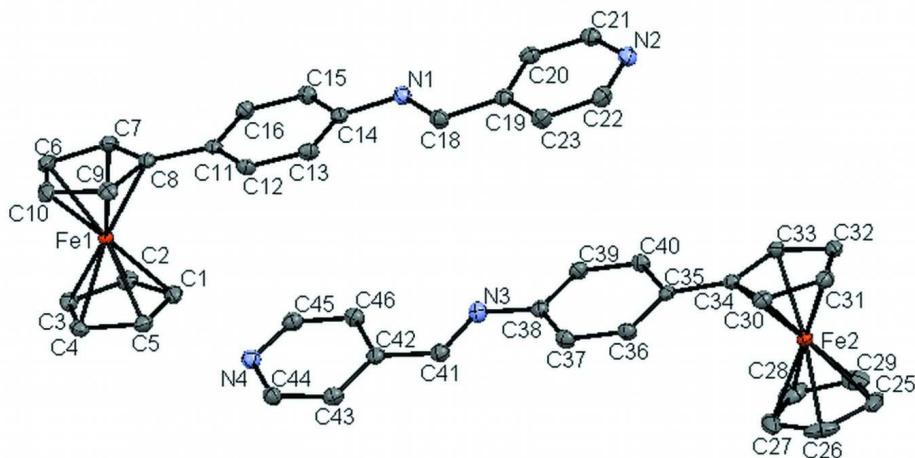

The conformations of the two molecules are different especially in the staggering angles of each ones cyclopentadienyl ring and also in the (pyridin-4-ylmethylene)aniline moieties. The two cyclopentadienyl rings of the ferrocene moiety also exhibit different staggered geometries where in one the conformation is skewed by 9.43 (2) $^{\circ}$ and in the other by 24.46 (1) $^{\circ}$. This differs from the value of 15.9 $^{\circ}$ observed by Nyamori & Moodley, (2011) and 2.17 (2) $^{\circ}$ by Nyamori *et al.*, (2012) in related structures. The phenyl group is tilted away from the ferrocene group in one of the molecules by a dihedral angle of 6.97 (1) $^{\circ}$ and by a dihedral angle of 10.30 (2) $^{\circ}$ in the other molecule. The phenyl ring is also slightly twisted from the plane of the pyridyl ring by a dihedral angle of 5.98 (2) $^{\circ}$ in one and by 6.51 (2) $^{\circ}$ in the other molecule.

S2. Experimental

The title compound was prepared by a modification of the reported method (Rajput *et al.*, 2006). Into a Pyrex tube fitted with a ground glass joint 4-ferrocenylaniline (130 mg, 0.47 mmol) and pyridine-4-carboxyaldehyde (76 mg, 0.71 mmol) were added. The compounds were thoroughly ground. The mixture turned into a red solid which was subjected to column chromatography using a mixture of hexane: dichloromethane in the ratio 8:2. (162 mg, 94%) m.p. 199–201°C. S3. Refinement

Carbon-bound H-atoms were placed in calculated positions [C—H = 1.00 for methine H atoms and 0.95 Å for aromatic H atoms; $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ and were included in the refinement in the riding model approximation

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
